CHIPD Payment Gateway

The Full Package For Processing Payments

CHIPD
PAYMENT PROCESSING

The Solution!

Giving your customers different payment options allows you to accept payments easier and faster. This solution allows for payments at the front desk, over the phone, across office locations, the ability to setup recurring payments AND customer payments from your website, allowing them to pay anytime, at their convenience, 24/7!

The CHIPD Gateway also allows multiple businesses to have credit card processing funds deposited into separate checking accounts through one system. All your reports in one spot!

1. Front Desk Payments

Your front desk staff can easily accept payments. A simple card reader connects to the USB port on any or all of your front desk computers. The credit card payment is then captured in the gateway.
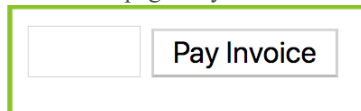

2. Recurring Payments

If customers would like to setup payment plans, your staff simply enters the frequency of when the customer's credit card will be charged. The recurring plan can run until you shut it off, or be setup to stop automatically after a set number of charges.
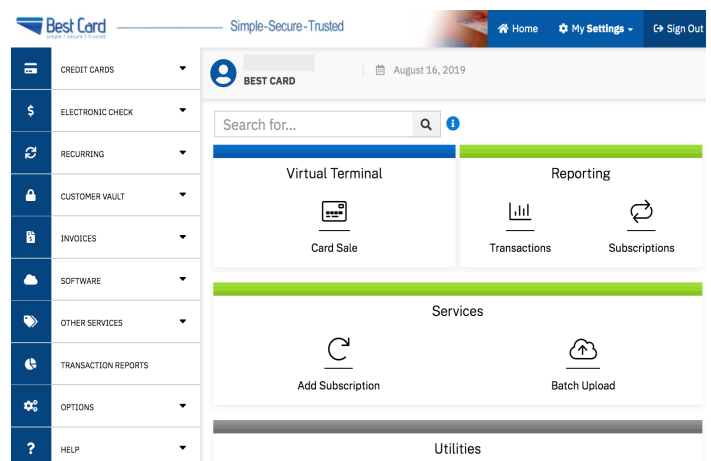

3. From Your Website

Customers can go to your website and click the "Pay Invoice" button. They'll then be asked for their credit card information to complete payment.

AND, we will build the payment page for you. Your web developer simply copies and pastes a code into a page on your website.

| | Pay Invoice |

4. Mobile

AND Process payments from your smart phone, tablet or other devices. Important to accept card-present transactions in the field.

Finally, a solution that allows employees to spend more time focusing on their job, and less time tracking down payments.
